- Application Development

## Project description

LifeSpan is a world leader in the emerging field of Biotechnology. LifeSpan's products and services are focused on helping pharmaceutical and biotechnology companies in their search for and validation of new targets for drug development.

LifeSpan needed to capture data quickly from millions of scanned images of medical reports that had been stored on disks, so they could provide timely statistical research data to their clients. A high degree of accuracy was required, with the ability to extract a high volume of information from a wide variety of document formats. Existing data capture programs reviewed by LifeSpan were inadequate.

## The TechLine Solution

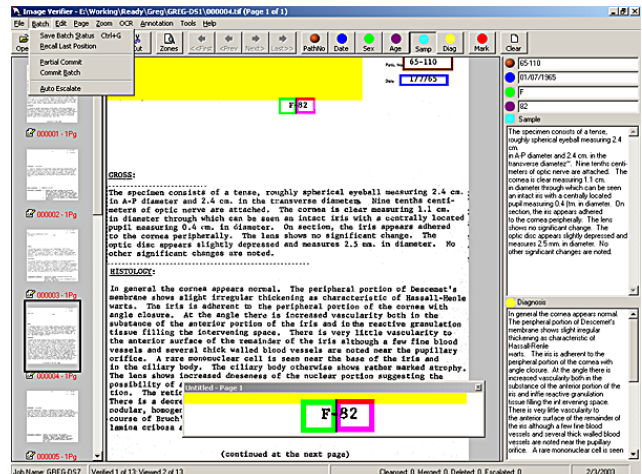

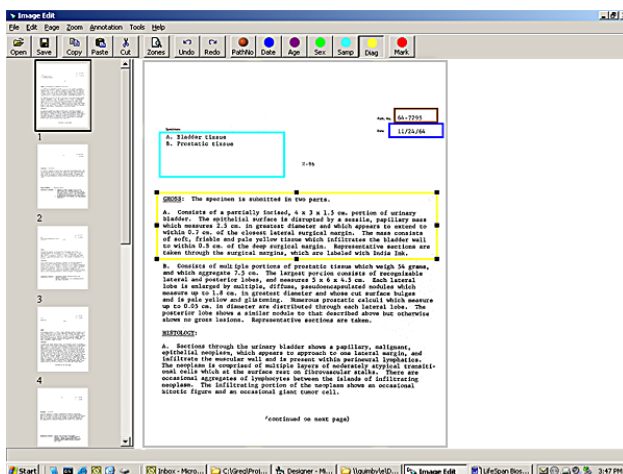

After researching available off-the-shelf applications, TechLine recommended a custom-developed multi-user data capture solution. TechLine selected eiStream Imaging Professional for Windows toolkit to quickly assemble a custom application following detailed user specifications.

After successfully passing rigorous production environment testing, TechLine provided full user training and continues to provide on-going support to the LifeSpan staff. LifeSpan has been able to process a higher volume of forms, extract more data, and increase the availability and value of their product for their customers.

LifeSpan selected TechLine for the combination of our development expertise and our extensive experience with forms processing and data capture systems. TechLine applied this expertise to produce a custom production forms processing solution that met LifeSpan's precise specifications for efficiently processing millions of forms.

## Customer Quote

Kent Ratcliffe, of Lifespan Biosciences says, *"The data cleansing and indexing program TechLine developed for LifeSpan has sped the extraction of data from our reports, but most importantly it enables us to capture more data fields, and increases the value of the information product we provide to our customers. The project was on time and in budget."*

Operators use TechLine's custom Imaging Capture utility to identify the pages of a document quickly, and select regions for data capture. Collect twice the data in half the time!
