

DATASHEET

RightFax Integrations with Multifunction Devices

Reduce costs and improve productivity by integrating RightFax faxing capabilities with your multifunction devices

AN OVERVIEW

RightFax integrates with a variety of multifunction devices to help organizations improve efficiency by integrating faxing capabilities with an organization's multifunction device infrastructure. It allows companies to consolidate all faxing services on the network, giving users convenient access to faxing capabilities on the same devices used daily for printing, scanning and copying. With RightFax, users gain both easy walk-up access and a central point of control for electronic as well as hard copy faxing. This enables them to streamline workflow processes and save time and money on administrative tasks. RightFax is the ideal solution for organizations that want to further leverage their multifunction devices for all their document development, duplication and distribution needs.

THE BENEFITS OF CENTRALIZING FAXING, PRINTING, SCANNING AND COPYING

Companies gain enormous benefits by adding RightFax network faxing capabilities to their multifunction device.

Reduce Costs - Eliminate many of the costs incurred when using traditional fax methods. Displace stand-alone fax machines: cost of devices, support contracts, phone lines, and supplies. Additionally, eliminate the costs of fax-enabling individual workstations or multifunction devices with modems and phone lines.

Increase Productivity and Efficiency - Allow users to print, scan, copy and fax from one device to save time and improve workflow processes.

Centralize Control of Network Faxing - Move all fax resources to the network to provide one point of control for hard copy and electronic faxing.

Simplify Administration - Install and manage RightFax with a suite of easy-to-use administrative tools designed to automate routine tasks, troubleshoot problems and monitor and report fax activity.

Improve Security - Keep confidential documents private by providing secure document delivery channels and assist with regulatory compliance by allowing administrative archival of sent and received faxes.

Scalable - Customers can start with a single server then expand to as many as 1,024 channels. Additional capacity can be added to include desktop, email, CRM, ERP, document management and other essential business applications.

RIGHTFAX FEATURES

Centralized Management - Centralized administration tools allow administrators to set-up, configure and manage fax services individually or globally.

Intelligent Least-cost Routing™ & IP Fax Delivery - Faxes can be delivered via alternate RightFax servers across corporate LANs, WANS, Intranets, or the Internet to ensure documents are delivered in the most economical way.

Intra-company Least-cost Routing - Companies can deliver internal faxes via the RightFax network of servers and bypass public switch telephone networks to eliminate phone charges.

Built-in E-mail Gateways - RightFax offers connectors for Microsoft Exchange and Lotus Domino and supports all SMTP Internet mail systems including Lotus cc:Mail, Microsoft Mail and Novell GroupWise.

Automatic Fax Distribution - Faxes can be systematically distributed to groups of users for fast, efficient processing.

VENDOR	PRODUCT LINE	MODEL NUMBERS
